

Bharani Kudala

Product Engineer | Full-Stack / Frontend Engineer

Hixson, TN | (423) 650-1056 | bunnykudala@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Product-minded software engineer and M.S. Computer Science graduate with experience shipping web and iOS products, contributing tested fixes to external open-source codebases, and building with React, Next.js, TypeScript, Node.js, PostgreSQL, and Supabase. Strong at turning ambiguous requirements into tested, user-facing features.

EDUCATION

Northern Arizona University - M.S. in Computer Science

Aug 2024 - Dec 2025 | GPA: 3.91/4.00

G Pulla Reddy Engineering College - B.Tech. in Computer Science

Dec 2020 - May 2024 | CGPA: 8.05/10

SKILLS

Languages: TypeScript, JavaScript, Python, Java, Swift, SQL

Frontend & Mobile: React, Next.js, Vite, Tailwind CSS, SwiftUI, UIKit, responsive UI

Backend & Data: Node.js, Express, REST APIs, PostgreSQL, Prisma, Supabase, pgvector, JWT

Tools & Cloud: Git, GitHub, Jest, Vitest, OpenAPI, Postman, Vercel, Railway, AWS, Linux

WORK EXPERIENCE

Quality of Life (Nonprofit) | Volunteer Software Engineer (Full-Time)

Apr 2026 - Present

- Rebuilding a unified nonprofit website in Wix Studio, consolidating multiple legacy sites into one CMS-driven platform.
- Developed reusable CMS-backed pages, navigation, and responsive components to simplify content updates across program areas.
- Automated intake and internal workflows with Wix Forms, 123FormBuilder, and Zapier; translated stakeholder requirements into iterative releases.
- Partnered with program stakeholders to gather requirements, revise information architecture, and deliver responsive UI improvements across multiple program areas.

Northern Arizona University | Teaching Assistant - Data Structures & Web Technologies

Jan 2025 - Dec 2025

- Led lab sessions for 50+ students covering algorithms, data structures, complexity analysis, debugging, and full-stack development.
- Reviewed 100+ code submissions and provided feedback on correctness, performance, design, and maintainability.
- Mentored students through debugging and design exercises, reinforcing maintainable implementation and structured problem-solving practices.

Slash Mark | Software Engineer Intern

Sep 2023 - Aug 2024

- Contributed to full-stack web development for an early-stage startup, implementing frontend and backend features.
- Investigated application bugs and data-flow issues, then tested fixes across affected user workflows.

OPEN-SOURCE CONTRIBUTIONS

Open-Source Contributor | 14 merged PRs across 14 external repositories

Jul 2026 - Aug 2026

- Cue #9:** Implemented configurable Electron global shortcuts with validation, persistence, reset/error states, and synchronized main/renderer behavior.
- Little AI Helper #209:** Added shared empty-upload validation across TXT, Markdown, and DOCX paths with regression coverage; passed lint, type-check, build, and 195 tests.
- Platypus #455:** Corrected backend error propagation so tool-set factory failures no longer trigger an invalid MCP fallback; added regression coverage.

PROJECTS

Weels & Chops - Co-Created iOS Apps | Swift, SwiftUI, UIKit, WKWebView, Three.js

2026

- Co-created and shipped **Weels** and **Chops** with one collaborator: an educational feed with offline reading, narration, and in-app purchases, and a paid offline 3D game; contributed across implementation, product iteration, testing, and App Store delivery.
- Worked across SwiftUI product flows, offline persistence, and narration for Weels, plus a native UIKit/WKWebView shell for Chops' bundled Three.js game.

AI Second Brain | Next.js, TypeScript, Supabase, PostgreSQL, pgvector, OpenRouter

- Built a multi-user RAG app that embeds notes, retrieves semantic matches, streams grounded answers with source snippets, and enforces per-user access through Supabase Auth and Row-Level Security.
- Implemented authenticated note ingestion, vector search, and tenant isolation so each user can retrieve and cite only their own knowledge base.

Word Hive Live | Next.js 16, React 19, Supabase Realtime, Tailwind CSS

- Built room-code multiplayer gameplay with live player, score, and leaderboard synchronization; manually verified a full room with 10 concurrent players.
- Implemented timed rounds, seven-letter and center-letter validation, pangram bonuses, and cumulative scoring in a responsive, no-login flow.

Finance Flow | React, TypeScript, Node.js, Express, Prisma, PostgreSQL

- Built account, transaction, budget, savings-goal, and analytics workflows backed by REST APIs and per-user JWT authentication.
